

APPENDIX E-355 P

CMDF UPDATE FROM IIF ERRORS AND ADVICE LIST

1. PURPOSE

a. This appendix describes the processing of the CMDF Update from IIF Error and Advice List, appendix H-3-4 of the catalog subsystem (illustrated as appendix F-44) Advice Code VB from the appendix F-12, CAR Edit and Validation Errors/New Item Notifications, will also be processed in accordance with this appendix when an internal catalog subsystem update or new NSN (DIC C03/YBX) is processed to the CMD File and additional management data is required.

b. The listing reflects errors or incompatibilities discovered in the Catalog Management Data File (CMDF) as a result of the weekly update of the CMDF from the Item Intelligence File (IIF).

c. Advice Codes listed below identify the condition which must be corrected so that the CMDF and IIF are compatible.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-50, Supply Status Codes.

b. Appendix B-69, CMDF Management Data Change Transaction.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Management Support Office of the Directorate of Supply Operations (DSO) is responsible for processing appendix F-44 and for forwarding it with other documentation, as required, to the Directorate of Technical Operations (DTO) and the Office of Comptroller for completion of necessary action.

4. PROCEDURES/INSTRUCTIONS

The Advice Codes listed below are to be processed as described herein.

<u>ADVICE CODE</u>	<u>DEFINITION</u>
FV	AAC Replaced Differs from Replacing AAC.
FW	NSN Established with Management Data from Cancelled NSN.
OR	Unit of Issue for Canceled NSN Differs from Unit of Issue for Replacing NSN.
QP	NSN is DSC/Service Managed Mix.
R4	Standardization Actions.
VB	Management Data Required.

a. ADVICE CODE FV.

(1) Advice Code FV indicates that an NSN has been canceled as a duplicate of another NSN, both of which are managed by the same DSC. The AAC of the canceled NSN differs from the AAC of the retained NSN.

(2) Personnel of DSO will determine if the AAC of the retained NSN requires changing.

(3) Should the AAC require changing, the DSO will prepare a CMDF Management Data Change Transaction, DIC YBY, in the format of appendix B-69 and forward through data entry to ODS for processing.

b. ADVICE CODE FW.

(1) Advice Code FW indicates that a DSC managed NSN was canceled to another NSN within the responsibility of the same DSC or that an NSN previously managed by another DSC has caused the establishing of a CMDR under a replacing NSN which is managed by the receiving DSC. A Catalog Management Data Record (CMDR) had not been previously established in the CMDF for the replacing NSN, however, management data which were applicable to the canceled NSN were automatically applied to the replacing NSN.

(2) Review listing to determine if the UI, SSC, AAC, and/or SOS require changing.

(a) When any of the above elements require changing, prepare a CMDF Management Data Change Transaction, DIC YBY, in the format of appendix B-69. Forward listing and coding sheet to Office of Comptroller for addition of other required data.

(b) When none of the elements (subparagraph (2) above) require changing, but the SSC is other than 2, forward the listing to the Office of Comptroller.

(c) When none of the above elements (subparagraph (2) above) require changing, and the SSC is 2, no further action is required.

c. ADVICE CODE OR.

(1) Advice Code OR indicates that a DSC managed NSN has been canceled as a duplicate of another NSN managed by the DSC. The UI of the canceled NSN differs from that of the duplicate (replacing) NSN. A UI Conversion Factor is required to convert the UI of the canceled NSN to the UI of the replacing NSN.

(2) Personnel in DSO will determine the UI Conversion Factor and prepare a CMDF Management Data Change Transaction, DIC YBK in the format of appendix B-69 on DLA Form 830 and forward through keypunching for computer processing.

d. ADVICE CODE QP.

(1) Advice Code QP indicates that a DSC/Service mix managed item exists in the CMDF. This notification is provided at the time the mix managed condition is created.

(2) Personnel in DSO will resolve this mix in accordance with procedures established in DLAM 4140.26M, chapter 4.

e. ADVICE CODE R4.

(1) Advice Code R4 indicates that a coordinated Standardization Action from DLSC has been processed in the IIF.

(2) Personnel will utilize the instructions in appendix E-171 P to coordinate the individual family relationships. In all Standardization 3 or E items, the Asset Applicability Code is 2 (one way replacement) and the Service Agency Restriction Code will be 1 for all Services, indicating total acceptance. The substitution is to be considered routine.

(3) Whenever the STDZ Code is 3 or E, the NSN in the NSN column is the nonstandard, nonpreferred potential SSC 6 item and the NSN in the FSC-NSN column is the head of the family/preferred/standard item.

(4) Whenever the STDZ Code is 1 or B, the NSN in the NSN column is the preferred/head of the family item and the NSN or NSNs in the FSC-NSN column are the nonpreferred/nonstandard/potential NSNs.

(5) The Item Manager responsible for the STDZ 1 or B, potential head of the family item, will obtain in appendix F-167, Supply Control Study, with a DIC ZR9 input and an appendix F-109, National Inventory Record, with a DIC ZCQ input.

(6) If the STDZ Code 3 or E item requires a Supply Status Code change to 6, prepare a DLA Form 830 in accordance with appendix E-069 P. Normally, however, this change to an SSC 6 should occur automatically. If the STDZ Code 1 or B item requires an SSC change, prepare a DLA Form 830 in accordance with appendix E-069 P.

(7) The terminal stocked items, Standardization Code 3 or E, that have an on-hand asset/position but also have a center managed coordinated/approved replacement with on-hand assets, will be eliminated from the supply system without referral to registered users, based on a DSO management determined cost-effectiveness consideration. The DSO management will determine the overall dollar value of Standardization E or 3 assets on hand in relation to the predicted time period over which issue to exhaustion would take place. The head of family item needs to have sufficient on-hand assets available to satisfy the immediate needs of the nonpreferred item. In general, the items to be disposed in accordance with chapter 31 will have an extensive issue to exhaustion time period coupled with a low DSO determined dollar value of assets. Items/Assets should be retained and issued when the demand forecast indicates that assets can be issued in a relatively short period of time, regardless of the small or large dollar value of assets. Item closeout, after total disposal, will be in accordance with chapter 28.

f. ADVICE CODE VB.

(1) Advice Code VB indicates that a DSC manager was established in the CMDF from an IIF Update adding a DSC with Inventory Management Responsibility Code 1.

(2) DSO personnel will prepare a CMDF Management Data Change Transaction, DIC YBY, in the format of appendix B-69 on DLA Form 830, in accordance with appendix E-069 P. The DLA Form 830 will be forwarded through Data Entry to ODS for processing.

5. FLOWCHART

Flowchart not required.
